Symposion: Defining Success of the City in the 21st Century

Apart from the C.A. Doxiadis Lecture, the main contents of this effort refer to the material collected before, during and, in some cases, after the Symposion. More specifically, the issue contains:

- a) Papers reflecting the presentations made during the Symposion and these concern papers delivered before and during the Symposion or documents that were prepared by the presenters after the Symposion.
- b) Papers that were made available at the Symposion by members who intended to attend but finally were totally unable to do so. These documents were made available to all participants but were never presented or discussed. Some were revised and edited by the authors.
- c) Papers that were prepared after the Symposion by members who could not attend.

Documents of all three categories above are classified and presented by main theme and sub-theme and in the sequence defined by the Daily Program (p. 19) that the reader is requested to consult.

Furthermore for each one of the nine sessions, the program provided for a Chairman, presentations, discussion, and a statement relating the presentations to the ekistics framework. However, no record was kept either of the statements by the Chairmen or by the discussants and the presenters of the ekistics framework.

For purposes of clarity and other practical reasons, the documents were classified into Parts 1 to 9 corresponding to the themes and sub-themes in the Daily Program as follows:

Part 1: Introduction Part 2: Nature Part 3: Anthropos Part 4: Society Part 5: Shells Part 6: Networks Part 7: Education and Research Part 8: Synthesis Part 9: Conclusions

In the indication of the structure and number of participants involved in each part, those who were not present in Berlin are considered as contributors.
